Check out the [documentation](#) for more information.

This model is a T5-base reranker fine-tuned on the MS MARCO passage dataset for 10k steps (or 1 epoch).

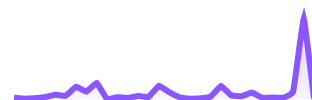

This model usually has a better zero-shot performance than monot5-base-msmarco, i.e., it performs better on datasets different from MS MARCO.

For more details on how to use it, check the following links:

- [A simple reranking example](#)
- [Rerank MS MARCO passages](#)
